

KICKER

Better feel, tighter sound, more punch!

World's first "Head to Head" bass drum muffler.

- Kicker is the world's first "Head to Head" bass drum muffler.
- Kicker dampens the front and rear bass drum heads and eliminates unwanted frequencies.
- Kicker gives a better pedal feel as it reduces unwanted vibrations on the drum head so the sensitivity is greatly improved.
- Kicker lasts a lifetime.

Instructions

Remove the resonant head from your bass drum and position the bass drum horizontally.

Position the Kicker in the bottom of the bass drum so that it makes contact with the batter side head.

Replace the resonant head so that the Kicker is held between the batter and resonant head.

Tune your bass drum as you normally would.

Better feel, tighter sound, more punch!

"The Kicker is custom designed for all bass drum diameters and depths. The Kicker is made of special Polyester foam which is much more durable than Polyether foam that is normally used in acoustic applications, and has a special structure that yielded the best results for the Kicker. Kicker is made proportionally for all bass drums.

That means the volume of air percentage is the same for all bass drums. Its design and material gives a clear sound in low frequencies, while muddy mid & high frequencies are absorbed. The result is a powerfull and very focused sound. Kicker is extremely light weight so overall weight is not affected. Instalation is very easy and requires no adhesives, glue, or tape."
